"Benton Stock Door"

FORGED CREATIVITY

The people at Acadian Iron Works™ excel in quality, efficiency and overall customer satisfaction. Regardless of whether the project is large or small, we can provide you with top-of-the-line Iron Door, Iron Railing or Iron Gate solutions for your home or business.

What makes our iron doors so superior?

We buy directly from select manufacturers and we assure that all of our products meet OUR SUPERIOR STANDARDS before ever reaching the consumer. We use only the best materials and construction techniques - we don't take shortcuts.

We have retooled the manufacturing process to exceed U.S. and European standards.

We use 12 gauge steel on doors.

All doors are insulated.

All products have six coats of paint and two coats of primer baked on, which allows us to have the strongest product warranty in the industry.

With such an emphasis on quality, how do we stay competitive on price?

We take advantage of favorable tariff agreements and we ship directly from the factory.

Do we have additional costs?

Most iron door companies do not provide glass. It must be purchased separately, therefore creating an increase in overall cost. This additionally involves a second contractor to install the glass, further driving up the cost and adding hassle for the buyer. We price and ship doors with glass installed, and the threshold welded to frame. The doors are also professionally packaged and crated to ensure they arrive safely to your job site.

Iron Doors

At Acadian Iron Works™ we offer a wide variety of the finest iron doors on the market. We take pride in producing the most beautiful and the most durable iron doors available. Not only are they exceptional in their beauty, but they are also exceptional in craftsmanship and durability as well. From the initial planning stages through final construction, our iron doors are crafted with the utmost skill and precision. Every door is highly customizable to suit your individual needs.

At Acadian Iron Works™ we have a large number of doors in-stock and ready to install in your home today! We also conveniently ship our doors directly to you, anywhere in the United States. Call or stop by today, and let our friendly, knowledgeable sales team help find the perfect door for you.

Impact Rated Stock Doors

Florida Hurricane Impact Rated Doors

All products have been tested for use in the High Velocity Hurricane Zones (HVHZ), this includes Miami-Dade, Broward, and portions of Palm Beach Counties. Buildings must be designed based on design wind speeds. The greatest wind speeds in the United States are found in these areas. The test protocols below have been developed specifically for the HVH.

TAS 201-94 Impact Test Procedures – Test specimens were impacted with a 9 lb 2X4 traveling at 50ft per second (Missile Level D). Each specimen is impacted at specific locations to replicate the dangers of wind borne debris in the event of a Tropical Storm or Hurricane.

Florida Certification Number: FL16749
www.floridabuilding.org

TAS 202-94 Criteria for Testing Impact & Nonimpact Resistant Building Envelope Components Using Uniform Static Air Pressure – Test specimens were tested for a design pressure of +/- 70 PSF. In this test, specimens must be tested to 1.5 times the design pressure, that's +/- 105 PSF, this is typically referred to as the "Structural Test Pressure".

TAS 203-94 Criteria for Testing Products Subject to Cyclic Wind Pressure Loading – This test procedure is to replicate hurricane force winds in which a door or window experiences with repeated wind loads. The test specimens are subject to 4,500 cycles of wind load in the positive direction and 4,500 cycles of wind load in the negative direction at varying loads.

About Construction

Fabrication Process

For us, forging iron is not just another job, it's an art. Creating the perfect iron door requires more than just the strength to bend metal. Ensuring a premium product requires vast creative vision, precise execution and the patience to carry out every minor detail to perfection.

Forging

Acadian Iron Works™ utilizes the best possible blacksmiths and equipment to guarantee premium results. Our doors are hand crafted the old fashioned way - with thousands of man hours worth of heat, sweat, muscle and most importantly, keen attention to the artistry of every curve, twist and joint. Each door is individually forged, hammered and shaped. Then it is sanded and inspected. This process is repeated until it is perfect.

Anticorrosion and Painting

All of our wrought iron doors receive the best possible anti-rust treatment. We use heavy duty sandblasting, pure hot zinc galvanizing, high-build zinc primer and magnetic paint. We use only superior quality and environmentally friendly paint for top coating and hand faux finishing.

Standard Compliance

Our dedicated Quality Control Team closely monitors every stage of the process - from fabrication to professional packaging. All our products are constructed in compliance to ISO 9001:2000 quality management standards to ensure the satisfaction of our customers.

Packaging and Delivery

Our doors are packaged using premium packaging materials and methods to secure the best protection possible for delivery. Additionally, they are shipped pre-hung for easy installation.
